

Ferromagnetic spin correlations in a few-fermion system

G.J. Conduit, P.O. Bugnion

Phys. Rev. A **87**, 060502(R) (2013)

Phys. Rev. A **88**, 013601 (2013)

arXiv:1305.3717, accepted for Phys. Rev. Lett.

Experimental setup

$$|F = 1/2, m_F = 1/2\rangle$$

Up spin electron

$$|F = 1/2, m_F = -1/2\rangle$$

Down spin electron

$$\hat{H} = -\frac{\nabla^2}{2} + gn_{\uparrow}(\vec{r})n_{\downarrow}(\vec{r})$$

Summary

Few-fermion system displays ferromagnetic correlations

Tunneling probability of $\frac{1}{2}$ due to degenerate triplet states

Losses restricted to narrow range of interaction strengths
